Azalea Standards

Alba Magnifica
Vigorous tall grower with large white single blooms mid season. Fragrant. Full sun or semi-shade.

Red Wing
Evergreen. Long flowering, brilliant red semi-double flowers. Full sun or semi-shade.

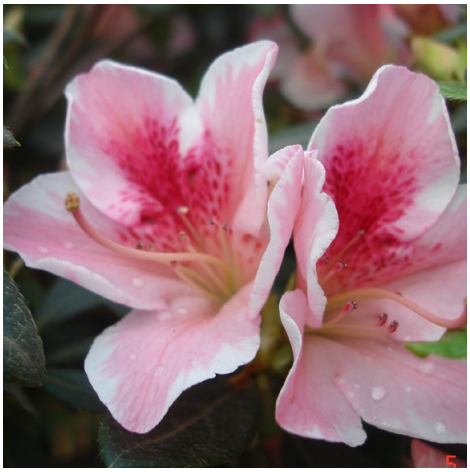
Fielder's White
Vigorous tall grower. Large white, slightly frilled bloom in Spring. Fragrant. Full sun or semi-shade.

Goyet
Sun hardy evergreen. Medium to tall bushy growth. Large double vivid red flowers.

White Bouquet
Compact bushy. Large semi-double frilly, creamy white double bloom in Spring and Autumn. Full sun or semi-shade.

Alphonse Anderson
Sun tolerant. Flower is single, soft pink edged white with rose throat. Masses of flowers during Spring. May occasionally flower in Autumn.

Kirin
Sun tolerant kurume. Silvery rose pink. Hose in hose. Small plant but has masses of small flowers in Spring. May occasionally flower in Autumn.



Pink Lace
Large light pink bloom, red speckled throat. Sun tolerant.

White Lace
Single large white blooms on a vigorous bushy plant. Flowers peak mid-season and spot in Autumn and Spring. Sun tolerant.

Japonica Camellia Standards (Winter to Spring flowers)

Brushfield's Yellow (1970)
Medium sized anemore-form of antique white, in which the petaloid centre is tinted pale primrose. Blooms June to September.

Desire (1977)
The sixty-petalled flowers have palest pink centre with deeper pink petal margins. Blooms June to September. Flowers hold well on the bush.

Margaret Davis (1963)
Informal double creamy-white peony flowers with bright rose or vermillion petal margins. Blooms June to September.

Nuccio's Gem (1970)
Exquisite white, large formal double blooms developing on spiral pattern in the petals. Popular. Blooms June to September.

Red, Red Rose (1970)
Brilliant rose-red formal double bloom, medium to large, with high rose-like central petals. Blooms June to September.

Sawada's Dream (1959)
Most beautifully formed of all formal double camellias. Strong pointed petals arranged in perfect spiral form. Pure white in centre and graduates to pale flesh-pink. Blooms July to August.

Tinsie (syn. Bokuhan) (1719)
Miniature blooms with bright red outer petals. Centre of white petaloids. Vigorous and upright. Blooms May to August.

Nagasaki (1859)
Semi double with large outer petals. Cardinal red blooms heavily marbled with white. Flowers May to September.

Hybrid Camellia Standards (Winter to Spring flowers)

Gay Baby (1978)
Semi-double flowers (5cm diam) in clusters along stem. Deep orchid-pink. New foliage purple-bronze. Blooms mid-late season (June to September).

Spring Festival (1976)
Small, soft pink, rose-form flowers. Golden stamens. Covered in flowers. Blooms July to September.

Cinnamon Cindy (1974)
Cinnamon fragrance. The 5cm blooms are peony form and in clusters. A central mass of snow-white petaloids, with 18 regular petals pale pink. Blooms early to late season (May to July).

Night Rider (1984)
Small blooms semi-double, narrow recurving petals, yellow anthers. New leaves shiny purple-red. Blooms mid-late season. Limited stock.

Sasanqua Camellia Standards (Autumn to Winter flowers)

Camellia sasanqua
Camellia hiemalis
Camellia vernalis

- Almost all are scented
- Foliage will stand full sunshine
- Prune after flowering and before new growth in spring

Beatrice Emily (1957)
Medium sized blooms in profusion. Magenta bud, loose informal double creamy-white flowers. Outer petals tinted lavender at margins. Late March to May.

Dazzler (1960)
Sp. hiemalis. Flowers are large (7.5cm wide) semi-double lightly waved rose red petals and rich golden stamens. Blooms late March to May.

Fukuzutsumi (1891)
Also known a Apple Blossom. Soft pink, merely flushed white, golden stamens. Flowers end of March to May.

Ginryu (1789)
Sp. vernalis. Semi-double to double, pure white, long fluted petals, guard petals a wash of pink on ends. Flowers May to July.

Hiryu (1847)
Sp. vernalis. Small rose-form double flowers of crimson-red. Straight yellow stamens. Flowers end April to June.

Jane Morgan (1967)
Semi-double flowers. Petals white but edged rose-pink. Mass of yellow stamens. Flowers late April to June.

Sasanqua Camellia Standards (cont.)

Jennifer Susan (1963)
Early flowering. Soft pink blooms are semi-double to peony form and commonly 7.5cm in diameter. Petaloids amongst stamens. Flowers April to July.

Lucinda Alba
Very early flowering (end March to May) with white blooms 7.5cm across.

Showa-no-sakae (1937)
Sp. hiemalis. Soft pink. Medium semi-double petals mingle with golden stamens. Soft musky scent. Flowers March to July.

Paradise Pearl
Soft pink buds open to white, semi-double flowers that are borne profusely on standard. Flowers mid April.

Plantation Pink (1948)
Large saucer-like single flowers in a showy, soft pink. Profuse yellow anthers. Flowers in May.

Paradise Blush (1995)
Semidouble. Slightly cupped towards the centre with a few stamens. Deep pink on buds retreats to the backs of the lower petals, leaving dazzling white flowers 6cm across. Flowers April–May.

Star above Star (1964)
Sp. vernalis. Flowers semi-double with one star superimposed on another. Petals white, lavender rose at edge. Flowers mid season July to September. Good espalier on fence.

Wahroongah (1975)
Flowers large, single and white edged with bright pink. Flowers early May.

Caring for Azaleas and Camellias

Azaleas

Position

Azaleas are generally sun hardy but in warmer climates require a semi-sheltered position.

Soil

They like an acidic soil, pH 5-6, so do not apply lime. Choose a well drained, humus rich soil. Add a good compost to build up the depth of the topsoil rather than dig down into clay soils.

If there is a tight root ball when removed from the pot tease out the roots. Slow deep watering of the roots is best. Keep soil moist until established. Water if leaves wilt. Use a complete azalea fertilizer in spring after flowering.

Prune lightly after flowering.

Japonica Camellias

Position

Japonicas should be positioned to receive the early morning sun or part shade for the rest of the day. Shelter from hot afternoon sun and wind.

Soil

Plant in well drained, slightly acidic soil. Tease out roots when planting. Keep roots moist, especially in hot, dry weather. Mulch with compost, leaf mulch or other organic matter to keep roots cool. In spring use a complete camellia fertilizer or a complete organic fertilizer. Avoid lime.

May be lightly trimmed to shape in spring after flowering.

Hybrid Camellias

Position

Hybrids should be positioned in the sun or part shade. Protect from strong winds.

Soil

Same as Japonica Camellias above.

Sasanqua Camellias

Position

Sasanquas tolerate more sun than Japonica Camellias. Will adapt to unbroken sunlight, but foliage will be a better green and the flowers more perfect in dappled shade. Protect from strong winds.

Soil

Same as Japonica Camellias above.
